Dear Bert:

As per our recent discussion, I have enclosed the revised copies of the 1996 Dangerous Waste Annual Report forms for Alaskan Copper Works, WAD980738546; and Alaskan Copper & Brass Company, WAR 000009241.

The changes for Alaskan Copper & Brass Company dealt with the reported quantity of waste material. I recalculated the waste to be 34,900 lbs. versus the 32,500 reported on the earlier form. The discrepancy arose from a wrong conversion factor from yards to pounds.

The changes in the Form for Alaskan Copper Works were in the form of additions of waste streams that were left out of the first report. The new additions include, saw cutting oil (page 7), saw coolant 390 (page 27), plasma burning sludge (page 35), and waste treatment sludge (page 37). I also reviewed all manifests and made minor changes to reflect the information correctly. I have included a letter from World Resources Company explaining the recycling credit percentages for the corresponding waste streams.

If there are any questions or clarifications needed, do not hesitate to call. I apologize for the omissions in prior reports.

Sincerely,

Mark Aniello
Director of Operations
